01 Introduction

1.1 Purpose of this document

This document explains, in plain language, exactly what we will build for Eight Two Five — and just as importantly, how it will work for you and your customers, day to day. Its only job is to make sure both teams are looking at the same picture before any pricing or building begins.

Please read it as a shared checklist. If anything is missing, wrong, or needs to change, this is the moment to say so. Once we both agree, we move on to the commercial proposal: timeline, pricing, and how we will deliver.

This is version 3.0. It folds in everything we agreed after your review — especially the three simple ways a customer can be measured, home visits with an easy booking calendar and a small deposit, and how designs and whole collections are retired and kept.

1.2 About Eight Two Five

Eight Two Five (8-2-5) is a Ghanaian fashion house founded in 2018 that designs and makes office and corporate clothing for women — jackets, trousers, and smart-casual pieces. Every garment is custom-made and bespoke, cut to each customer's own measurements rather than sold off the shelf. Today the brand reaches its customers through Instagram and Facebook.

Designs are created by the Eight Two Five team and released in themed collections. Once a collection's fabric runs out, those designs are retired. This keeps each design limited and protects the brand's identity. Collections are released in batches — roughly every two months or each quarter — and a typical collection holds around ten designs.

1.3 About XCreativs Technologies

XCreativs Technologies is a Ghanaian technology partner based in Accra. We design, build, and operate digital systems for businesses and institutions, with a focus on long-term outcomes rather than one-off delivery. For this engagement, that means building a platform Eight Two Five can rely on and grow with — engineered as real, custom software, not assembled from a website template — and a platform that looks and feels like your brand, not like everyone else's.

02 The problem today

Today, Eight Two Five sells the way many of the best small brands begin — in the messages.

A customer sees a design on Instagram or Facebook and sends a message. Then the back-and-forth begins: which design, what size, share measurements, agree a price, arrange payment, sort out delivery. Every order is its own conversation, and every conversation has to be rebuilt from scattered messages.

It works — it is what carried the brand this far. But it has clear limits:

- **It does not scale.** Every order needs your personal attention, from the first message to the final delivery.
- **It is hard to reach far.** Serving customers outside Accra is difficult, and outside Ghana, harder still.
- **Details get lost.** Measurements, choices, and prices live inside chat threads you have to scroll back through to find.
- **Your time goes the wrong way.** It is spent chasing conversations instead of designing and making.

The product is premium, and limited by design. The way it is sold should match the quality of what is being sold. That is what this platform is for.

03 What we are building, in one picture

The goal is simple: give Eight Two Five its own storefront — owned, branded, and always open — where customers anywhere can browse a collection, open a single design, give their measurements, pay, and book, all in one smooth flow.

The website does not replace the conversation with your customer. It organises everything around it. The repeatable part of selling — browsing, choosing, measuring, paying, booking, and tracking — happens cleanly on the platform. The human part — custom sizing, design changes, special delivery — flows into one place where you can handle it with the full picture in front of you.

The website itself is a small, clear set of pages. A Home page that welcomes visitors and leads them to the collections; an About Us page that tells the Eight Two Five story; a Contact Us page so customers can reach the team; and the Store, where the collections, designs, sizing, and booking all live. The Store is the heart of it, and the other pages frame the brand around it.

What success looks like

During discovery, Eight Two Five described success in clear terms. The platform should let the brand and its customers:

- Give every design and every collection its own dedicated, shareable link.
- Let customers browse the full range of collections and the designs inside each one.
- Take payment online — mobile money and cards, including international cards — with prices shown in Ghana Cedis.
- Let a customer fully book one product, with their own measurements attached, through their own account.
- Give a customer who does not fit a standard size a choice of how to be measured — including a home visit they book on a calendar.
- Keep everything in one store, with designs grouped into named collections — so a customer can see all designs, see all collections, or open just one.
- Support delivery by dispatch, or pickup where the customer collects the garment.
- Keep the customer informed online and by email, with clear status and timeframes once an order is placed.

04 How the platform works

4.1 The customer journey

Here is the customer's journey from start to finish. This is the experience the platform is built around.

- **Browse.** The customer explores the collections, each with its own name and theme, and opens a collection to see the designs inside. They can also look through every design at once, or search for what they want. No account is needed just to look.
- **Discover a design.** Each design has its own page with photos, details, and a shareable link the team can post on Instagram or send on WhatsApp.
- **Choose a size.** The customer picks a listed size band, each with a full size chart and a set price in Ghana Cedis. If none fits, they choose how to be measured — on their own, or with a visit (see 4.3).
- **Adjust the design, if they wish.** They keep the design exactly as shown, or request a change — for example, sleeveless instead of sleeved (see 4.2).
- **Pay and book, or send a request.** If everything is standard, the customer pays online to confirm and book. If anything is custom, the order becomes a request to Eight Two Five (see 4.5). The account is created right here, at the last step, as part of completing the order.
- **Get made and notified.** Eight Two Five makes the garment — roughly two weeks, depending on current bookings — and the customer receives email updates and on-site status at each stage.
- **Receive it.** The garment is delivered by dispatch or collected in person, based on the choice made at booking (see 4.6).

4.2 Two kinds of customisation

Ordering on the platform works a little like ordering a good meal — you start from the menu, and you can adjust two things to suit you.

Size and measurements. Each design lists standard size bands — for example 8, 10, 12, 14, 16, 18, 20, 24 — and each band carries its own detailed size chart (bust, waist, and the rest) and its own set price in Ghana Cedis. If a customer does not fit any listed band, they can be measured instead — and there are three simple ways to do that, covered next in 4.3. A custom measurement carries no set price; it is bespoke, so Eight Two Five agrees the price with the customer directly.

The design itself. The design can be taken exactly as shown, or adjusted. If a customer wants a change — say the dress has sleeves but they would prefer it sleeveless — there is a custom area to specify it. A design change also carries no set price.

So a customer can shape their order much like adjusting a meal: keep the standard, or customise the size, the design, or both.

4.3 Getting measured — three simple ways

Not every customer fits a standard size — and that is perfectly fine. When a size does not fit, the customer simply chooses how they would like to be measured.

There are three ways, and the customer picks whichever suits them. Figure 1 shows them side by side.

FIGURE 1

Getting measured — three simple ways

Measure yourself. The customer fills in a simple measurement form on the website and carries on. Nothing else is needed.

Eight Two Five comes to you. If the customer would rather be measured in person at their own place, they pick a day and time from the times Eight Two Five has opened on its calendar. To book the visit, they pay a small deposit of GHS 500. This is not an extra charge — it counts towards the price of the garment. It holds the appointment and shows the customer is serious; and if they later change their mind, it helps cover Eight Two Five's trip.

Come to the Eight Two Five workplace. If the customer prefers, they can come to Eight Two Five to be measured in person. There is no time to book and no deposit — it is treated just like walking in.

Setting the times is simple. Eight Two Five opens the days and times it is free from its own dashboard, and only those show up for customers to choose. Once a time is taken, it is no longer offered to anyone else.

Changing a visit. Because a deposit has been paid, a visit cannot be cancelled or rescheduled on the website. Instead, the customer sees a button to call Eight Two Five, and Eight Two Five makes the change from its dashboard — which opens that time again for someone else. This keeps things clear and avoids missed appointments.

After the measurements are taken — at the customer's place or at the workplace — the order carries on exactly like any other custom order: Eight Two Five sets the design, price, and timeline, and sends a payment link for the rest (see 4.5).

4.4 How pricing works — one simple rule

THE RULE

If the order is fully standard — a listed size band and the design exactly as shown — the price is on the website and the customer pays to book. **The moment anything is custom** — the size, the design, or both — no price is shown, and the order becomes a request to Eight Two Five.

This keeps the principle you asked for: a garment is paid for before it is made. A standard order is paid online at checkout. A custom order is paid once you and the customer agree the price — collected through the same account, so no order ever sits in production unpaid. Custom work stays flexible, because the price depends on the request and is agreed with you directly. Figure 2 shows the two paths an order can take.

FIGURE 2

How an order moves through the platform**4.5 How custom orders are handled — the dashboard, not the chaos**

This is where the platform earns its keep.

Long order details pasted into WhatsApp get messy. The information you need to make a decision slides up the thread, and you end up scrolling back and forth to resurface it. So custom orders do not go to WhatsApp. They land in your dashboard as a clean, complete request — every measurement and every choice, in one place.

Design-change requests follow this same path. A request-to-change option sits on every design page, and the request lands in your dashboard exactly like a custom-measurement order.

When you open a request, there is a WhatsApp button. One tap takes you straight to that customer's WhatsApp, so you can talk. WhatsApp does what it is good at — the conversation. The dashboard does what it is good at — holding the order, the details, and the record.

Once the conversation is settled, you come back to the dashboard and bring the order in line with what was agreed — the final design details, if anything changed during the chat, alongside the price and the delivery timeline. Everything the customer asked for is recorded on the order itself, so the dashboard becomes the single, accurate reference you work from while the garment is being made, rather than a memory of a WhatsApp thread. The customer is notified by email and sees the update — design, price, timeline, and status — in their own account.

Then you take payment, without leaving the system. From the order, you generate a payment link and send it to the customer — by email, or through the same WhatsApp chat. The link uses the same payment provider and the same account as your online store, so a custom order is collected exactly like a standard one. The customer can pay by mobile money or card on that one link; there is no separate method for you to manage.

The moment payment clears, the order books itself. The provider confirms the payment back to the platform directly, and the order is marked booked on its own — no one has to tick it off by hand. When you refresh your dashboard you see it as booked; when the customer refreshes theirs, they see the same. Money in and a confirmed booking always move together, so there is never an order sitting in production that has not been paid.

And if a customer ever pays another way, such as cash on collection, you can simply mark the order as paid, with a short note for your records. That keeps the dashboard honest: it stays the one place where every order is either paid or clearly not. Clean for you, transparent for them — that is the whole point of having a platform rather than running everything through chat.

4.6 How delivery works

Delivery is chosen at booking, and the garment price is always what secures the booking.

Pickup. No delivery charge. The customer pays the garment price only and collects the garment when it is ready.

Dispatch — rate available. For areas where Eight Two Five has a set delivery rate, the fee is added to the garment price and billed together at checkout.

Dispatch — no set rate. For areas without a set rate, the customer still books and pays the garment price. After the garment is ready, Eight Two Five gives a delivery price and arranges it directly with the customer. This part is handled between Eight Two Five and the customer, outside the website.

In short: the website always collects the garment price to confirm a booking. Delivery is either added automatically where a rate exists, or arranged directly with Eight Two Five where it does not.

4.7 Staying informed

By default, every order notification also goes to email. The customer sees status on the website and receives email updates — order confirmed, in production, ready — along with timeframes. Nothing is left to guesswork.

4.8 Accounts — light by design

A customer does not need an account just to browse or to start an order. The account is created at the last step, as part of completing the order, so it never gets in the way. Their dashboard is deliberately simple: see your orders, follow each stage of production, and know the moment a garment is ready — with email to match. Nothing more than they need.

05 What Eight Two Five controls

Everything customer-facing has a private counterpart: your own dashboard to run the store, without needing us day to day.

It is built to feel familiar — uploading and arranging your designs works much like posting to Instagram or Facebook, something you already do — and it is kept to what is actually useful:

- Upload and manage collections, and add a short note or description to a collection — and to individual designs — to tell their story.
- Upload individual designs with their photos, details, size bands, charts, and prices.
- Retire a single design, several at once, or a whole collection. Retired items leave the shop but stay safely in your dashboard, so you can bring them back later — with a separate, deliberate option to delete for good.
- Open your calendar and set the days and times you are free for home-visit measurements; those are the times customers can book. Reschedule or cancel a visit when a customer calls, which reopens that time for someone else.
- See incoming orders — standard bookings, custom requests, and visit bookings — neatly sorted, with all measurements and choices attached.
- Open any order, tap WhatsApp to talk, set the design, price, delivery timeline, and status, then send a payment link to collect through your usual account — and the customer is notified automatically.
- Change store settings when you need to, such as the home-visit deposit amount.
- See how the store is performing: sign-ups, online customers, and the analytics that genuinely help you run the business.

This covers the whole store side — designs, collections, prices, orders, and settings. The other pages of the website are designed and set up with you as part of the build.

We keep this clean and uncluttered on purpose. Running the store should feel light, not like another job.

06 Scope of work

This is what we will build. Each area below is part of the agreed scope for this phase.

AREA	WHAT IT INCLUDES
Website Pages	The pages that make up the site: a Home page (welcome and highlights), an About Us page (the brand story), a Contact Us page (how to reach the team), and the Store itself. All designed and built for the Eight Two Five brand.
Storefront & Collections	One store where customers browse the collections, each with its own theme, open any collection to view its designs, look through every design at once, or search. Designs or whole collections can be retired and archived, then brought back later.
Design Pages, Notes & Links	A dedicated page for every design, with photos and details. Collections and individual designs can carry a short note or description. Every design and every collection gets its own shareable link for Instagram, Facebook, and WhatsApp.
Size Bands, Charts & Pricing	Standard size bands, each with its own detailed size chart and its own set price, shown in Ghana Cedis.
Getting Measured	Three ways for a customer who falls outside the standard bands: enter their own measurements, book a home visit, or come to the workplace. Custom measurements carry no set price and become a request to Eight Two Five.
Home Visits & Booking Calendar	A simple calendar where Eight Two Five sets the times it is free and customers book a home-visit measurement. A GHS 500 deposit — shown clearly and counted towards the garment price — confirms a home-visit booking. Eight Two Five reschedules or cancels visits from the dashboard, reopening the time for others.
Custom Design Requests	A request-to-change option on every design page. The request carries no set price and is sent to Eight Two Five as part of the order.
Order Routing	Fully standard orders are priced and paid online to book. Any custom order — a custom size, a design change, a home visit, or a workplace visit — is routed to the Eight Two Five dashboard as a request, with all details attached.
Online Payments	Secure online payment through one provider that accepts mobile money and cards, including international cards, from day one.

AREA	WHAT IT INCLUDES
	Standard orders are paid at checkout, and the fixed GHS 500 home-visit deposit is taken at booking through the same account. For other custom orders, Eight Two Five generates a payment link from the dashboard — same provider, same account. In every case the provider confirms payment back to the platform and the order is marked booked automatically.
Customer Accounts	A light account created at checkout, giving the customer a simple dashboard to view orders, track each stage of production, see a booked visit with a call button, and receive email updates.
Delivery & Fulfilment	At booking, the customer chooses pickup (no charge) or dispatch. Where a delivery rate exists for the area, it is added automatically; where it does not, delivery is arranged and paid directly with Eight Two Five.
Notifications & Status	Automatic email notifications and on-site status updates — order confirmed, in production, and ready — with clear timeframes.
Eight Two Five Dashboard	A private area to add and manage collections and designs, add notes, set size-band prices and delivery rates, set the home-visit deposit, open and manage the booking calendar, see incoming orders and requests neatly sorted with measurements, open WhatsApp per order, set design, price, timeline, and status, generate payment links, mark an order paid when taken another way, retire and archive designs or whole collections, and view relevant store analytics.

07 How we build it

A few principles guide how this platform is built.

Custom-built, not off a template. Engineered for Eight Two Five from the ground up — so it stays reliable, grows as you add collections, and is properly looked after over time.

Designed for the brand, not by a formula. The look is made for Eight Two Five — the right typeface, your brand colours, clean and considered. It should read as your brand, not as a stock template, and not as something generic. The design is fully custom.

Solid, not flashy. The features here are proven, well-made building blocks, done properly and built to work — without over-engineering. Simple wins. Everything serves the mandate: browse, customise, pay or request, track, and fulfil.

08 Out of scope (this phase)

To keep the project focused and the budget honest, the following are not included in this phase. Any of them can be added later as a separate piece of work if Eight Two Five decides it wants them.

- **Ready-to-wear sales or stock-count inventory.** The platform is built around made-to-measure, booked production — not shelf stock.
- A customer loyalty or rewards programme.
- **A downloadable mobile app (iOS or Android).** The platform is a website that works beautifully on phones, but it is not an app from a store.
- **Live courier integration** that automatically books a dispatch rider and tracks the parcel in real time. The platform records the delivery choice and adds set rates where available; actual dispatch is handled by Eight Two Five.
- **Taking variable custom prices, design-change prices, or off-rate delivery payments through the website.** By design, these are agreed and collected directly by Eight Two Five. The one set amount taken online is the fixed GHS 500 home-visit deposit.
- **Free-form editing or rebuilding of the website's pages.** Eight Two Five fully manages the store — designs, collections, prices, notes, and settings — but the layout and wording of the other pages are designed and set up as part of the build, not changed freely from the dashboard.
- Ongoing content creation, photography, or social media management.

09 Assumptions

This scope is based on the following assumptions. If any of them are not true, we will revisit the scope together.

- Eight Two Five provides the design photos, descriptions, collection names, and themes for launch.
- Eight Two Five provides the size bands, their charts, and their prices, plus the standard set of measurements it needs from customers.
- Eight Two Five provides the delivery rates by area to be loaded for the auto-added delivery option.
- Eight Two Five provides the days and times it is available for home-visit measurements, to load into the booking calendar.
- Eight Two Five confirms the home-visit deposit amount (GHS 500 to start), which it can change later from the dashboard.
- Eight Two Five manages the making of garments, dispatch arrangements, custom and change-request pricing, and any delivery payments taken directly.
- The brand colours, logo, and any brand guidelines are provided to us, or agreed early.

10 Next steps

1. **Review.** Eight Two Five reviews this document and confirms it reflects the plan, or notes anything to adjust.
2. **Confirm.** We update this document to a final version and both sides sign off below.
3. **Commercial proposal.** XCreativs Technologies prepares the commercial proposal — timeline, pricing, and how we will deliver — based on the agreed scope.

11 Acknowledgement

By signing below, both parties confirm that the scope described in this document reflects what will be built in this phase. This document sets scope, not price or timeline; those follow in the commercial proposal.
